

Review Card 07

What to do if...

... you want to search for official support available for a better integration of the Dys students in school life?

Integration of a Dys student in school life

Co-operation and communication among teachers are the basis for good quality education and improved teaching experience at school. It ensures coherent teaching practices, understanding the students' character and needs, including helping teachers support one another when facing difficulties. It could be said that teacher co-operation is even more important when they teach students with learning difficulties.

What you can do:

Here is the list of ideas that you can apply in your classroom:

- **Try different methods** with students in different classes: however, once a suitable method has been identified, it is better to ensure that the teachers use consistent methodologies, or the student might end up being confused.
- **Cooperate with other teachers.** Collaboration with them reinforces students' different learning strategies. Share what you have done that has helped your child. Working as a team is also reassuring for the child that they are not left alone and there are efforts to provide them the best support possible.
- **Use a computer program or a common notebook** and organize frequent meetings to talk about the child with Dys and to follow their development all along the school year. Seeing how the child progresses in different school subjects can help you highlight their strengths and adapt your teaching style.
- **Do inform your colleagues** if you use a notebook to communicate with them on the student's progress and strategies that worked, as children might be too shy to spontaneously hand it out to each teacher.
- Talk to other student teachers **to set a common strategy** to help the child. You can also talk to the school's technical experts (psychologist) who might be able to give you some additional information and advice

Tools recommendation:

Click on the words here under: they are links that send you to a specialised Website.

- Google Form: enables you to create forms and online surveys.
- Seesaw: a platform that allows you to better communicate with students and their families.
